*Customized for you!*
Combining with the stainless countertop with the tempered glass, this kitchen cabinet is the shining star.

The 4 standing pantries is enough for storage. The tempered glass door is high temperature-resistant, and it’s very safe in material.

As to the surface of the wall cabinet, it has the lacquer texture when touching it, and the open cabinets below the wall cabinet set a mood of light-hearted.

The stainless countertop is very easy to clean and care.

3 main characteristics of this unit:

● The reasonable layout.
● The ergonomics and humanized design.
● The kitchen work triangle.
The island of this gorgeous kitchen mimics ship shape and brings unforgettable visual impact. The hue mix of white and red is a deliberate decision that balances coolness and warmth. The state-of-the-art high glossy fronts and clean lines define its modern conciseness and elegance. Not to mention, there are lots of intelligent accessories hidden which give pleasurable operation benefits.
A thick and molded solid surface makes for an impressive appearance. This white sleek countertop mimics the aircraft carrier deck. It teases the eye and reveals its toughness. The countertop also hosts a four-burner cooktop which is enough for a social gathering. The white high-gloss fronts, adorned with long brushed handles, resemble lateen sails in ocean and flow through the theme thoughtfully.
This all-island kitchen seems to be a contemporary movement. Maybe that’s because it maximizes wall space, allowing for more openness between rooms and for more large windows at exterior walls. It is nearly 15 feet long, giving you plenty of room to cook and entertain.
The kitchen has clearly become the most important part in the house, as the design focus on lifestyle and enjoyment. Yes, the space is about cooking, but it is also about atmosphere, socializing, beautiful and functional design.

The lines are being blurred between the kitchen and living space as larger multi-purpose rooms are being created. Combining the kitchen and lounge result in fluid transition between the spaces.
It is a glass lacquered handle-free kitchen. Black framed glass doors create a mysterious atmosphere. Adding a breakfast bar introduces a warm contrast to the slim quartz worktop. The countertop is just 12mm thick, giving the impression that it floats above the units below. But make no mistake, it’s strong enough to support all your heaviest pans and stand up to a lifetime’s use.
PANTOM High Gloss

OP16-L22

It’s not often that you see a kitchen island made of natural sintered surface. So it is a welcome change. It allows accurate manufacturing and results in seamless appearance.

Humanization Design

As you can see, besides its stunning appearance, the function of the island is also impressive. The extending U-shape bar gives you more dining space.
“You cook, you serve”.
The cooking area and the dining area are integrated together to create a more enjoyable time.
The open wall cabinets are another eye-catcher which provide open and enough spaces for your favorite collections, and they serve as decorations for your kitchen.
The grey color cabinet door material goes well with the rangehood, and brings a post-industrial element, which makes your cooking efficient and convenient. Cooking in such an atmosphere, you would have everything under control.
This contemporary kitchen will please any city dweller with its sleek appearance. Use of a pure white color scheme and LED cabinet makes the kitchen look more like science fiction than reality.
Modern White PVC and Orange Melamine Kitchen Cabinet

The dining table matches the cabinetry and the island perfectly. Knee space is retained for diner, making the entire length of the counter usable. This is also a good way to visually lighten the size of a big table area.

The high cabinet features a strong vertical shadow line that underpins the linear nature of the design.

OP16-PVC03

BOLADO

Today’s Kitchens Are All About The Kitchen Experience.

The kitchen has clearly become the most important room in the home, so the design focus is on lifestyle and enjoyment. Yes, the space is about cooking but it is also about atmosphere, socializing, and beautiful, functional design.
The natural sintered surface opens surprising dimensions in design, quality and sustainability. It allows accurate manufacturing and results in seamless appearance. The 3mm thick sintered surface is highly resistant, easy to clean, recyclable and heat-resistant. Matte grey lacquer display cabinets add rich elements for the kitchen, so it won’t appear too hidebound.
This modern kitchen has very clean outlines. To follow the theme of simplicity, we use hidden bar handles for all units. We use cream laminate for all wall units. For the base units, we use light grain melamine. The floor is further darker than base units. The whole color difference from top to bottom escalates increasingly.

By the way, we design open shelves in the island for handy storage. It is also another consideration to bring some exposed visual interests.
This modern kitchen gets a bit of Japanese flair from the simple wooden cabinet that we see pictured here. The cabinets are simple and sparse. Wood forms the basis of the Zen-decorating design. Simple, elegant and totally modern. If only the dishes inside were inspired by Japanese design - it would be perfect!
Simplify your life, and fills your kitchen with the scent of simple elements.

Elegant and Functional at the Same Time

The new kitchen range in high gloss yellow. Combined with black acrylic open cabinet, it creates a fascinating color feature what is very impressive, but also with the attention to detail.

GETARIA Acrylic

OP15-A01

The design combines the wall cabinet with the base cabinet together to create a integrated space.

The built-in wall cabinet is a functional place for storage.
A good example of beautiful function. Most of us think of open shelving as being against a wall, but this shelving system adds storage in a normally blank space. Adding this kind of shelving automatically gives you much more kitchen storage space without obstructing the view.
Combination of black and green creates an impact of vision. Semi-open kitchen layout makes it easy to communicate with other people or persons in cooking. Imaging that when you are cooking, your children playing around and talking with you. How funny it is!

Color Coordinated
Open undercounter cabinet provides both storage and design opportunities, as this neatly arranged collection of ingredient shows.

Ample Working Space
Long countertop ensure that you have enough space to put prepared vegetables, meat, spices or cooked food.
The lines are being blurred between the kitchen and living space as larger multi-purpose rooms are being created. Combining the kitchen and lounge areas resulted in a fluid transition between the spaces.
Metallic golden and grey display a neutral combination, which makes the high glossy surface comes with sober sense. The sharp white and grey countertop accentuates the sober theme as well. Blue LED strips not only adds extra lighting, but also reveals its modern sentiment again.

The curved doors, however, soften this atmosphere and serves a pleasant visual balance deliberately. Open cabinets are another eye catch which provide open and enough space for your favorite collections.
The whole kitchen is almost in white and it gives a feeling of tidiness. Matching with the wood grain series, such as the long table and the door, the whole kitchen presents a natural style, which is popular with people in Indonesia area.

Beautiful in Design
Electronic appliances could be inserted in these functional cabinets, which could save a lot of space and make the kitchen looks tidy. Besides, the countertop could provide a place for hot dishes putting.

Visual Interest
By putting some special items, such as distinctive crafts, beautiful dishes in the open cabinet, people may feel like wandering at a show. It is a good way to decorate your home.
From its color-scheme to its geometry, this kitchen is right up with the times. Its combined table-and-island makes it a perfect link between living and cooking areas. Black high-gloss panels highlight in grey lacquer which interact to produce a highly amenable atmosphere. This kitchen isn’t just for cooking – it’s for living.

Various Storage
Open shelves against wall cabinet provide more storage for you. Also, it is convenient for you to take frequently-used objects from the shelves. Cherry wood grain melamine combine with white lacquer, which creates a composed color feature - not only impresses with the feel of the material, but also with the attention to detail.
Since it’s natural texture and easy to achieve stately visual effect, rock surface becomes a popular trend in super-modern kitchen design. It is specially suitable for a spacious room and matches ceramic floors and walls. The brown sintered surface comes from SPAIN, one of the leading rock surface manufacturers in the world. Besides its visual benefits, sintered surface is also the most heat-resistant door material.

We use white sleek acrylic fronts as all built-in fronts, with the aim to exhibit a dynamic balance and create a satisfying tension in the room.

In a whole, this kitchen shows its reasonable strengths with its island, but it is not overwhelming because of the use of white acrylic.
This fascinating kitchen defines that even in a narrow space, we can also create a work of art. The secret is the use of geometry. Firstly, it is the extended bar countertop, which creates a cozy dinner area. The bar leg is the key, because we follow the use of white solid leg, instead of stainless steel or other material.

Underneath the range hood, the countertop bulge breaks one-wall shaped dullness. Meanwhile, the shelf and opening cabinets exhibit a fluid beauty in a high level. Kitchen fronts are the mix of high glossy oak and white melamine, stunning and very easy to care.
The lemon green is really an eye relaxation when you enter this kitchen. It is spread from base units, thick countertop to open shelves and wall panels. The thick lapping green countertop create a small preparation and dinner area. Irregular black wall units increase geometry charms and add mystery. White pantry cabinets are symmetrical and can meet storage purposes effectively. As a whole, this kitchen implies a peaceful pace of life.
A kitchen island can be many things, cooking area, dining area, preparation area etc. This white island countertop catches eyes with its extra thickness and arch leg. Base fronts are veneered, which presents unsurpassed high gloss visual impact and very easy to care. The design of white wall units are deliberate. They can be associated with airplane luggage cabin. Handle-free doors enhance the conciseness.

TIROL
High Gloss Veneer
OP13-285
With its hidden handles, this modern kitchen looks cute and clutter-free. The high gloss acrylic fronts present its tender beauty and state of the art crafts. The countertops echo the same olive green with base units. To break the monochrome, we use the versatile black to accentuate the whole hue. The door fronts are acrylic. It is another choice to achieve high gloss surface, and it is more scratch resistant.
The mix of high glossy blue and white is the hint of ocean. White pantry units brighten the whole space. However, blue open cabinets add storage convenience and compensate the possible visual dullness. All doors are handle-free, plus with the hidden built-in range hood, which greatly follow the theme of modern simplicity. This clean and bright kitchen will more or less give a delightful mood of cooking and dining.
The combination of white and gray acrylic looks simple. Adding yellow open cabinets, this kitchen cabinet appears much more beautiful. Life is ordinary, but always has sweet surprise.
Taylor is clean and minimalist, with the combination of white flash lacquer door panels, black worktop and splash wall, handle-free design. The kitchen gets its inspiration from diamond, mainly for the convex range hood and the beveled worktop, which represents OPPEIN’s unceasing pursuit for design and technical innovation. Taylor also features its intelligent and ergonomical accessories. The right and left pantry pull outs provide enough storage space. The hanging pull-down system allows easy access and operation.
The kitchen in dark wood grain color and beige presents a modern and elegant look. The layout of the kitchen cabinets appears symmetrical. With the pentagon high cabinets on both sides, the whole kitchen looks unique and attractive. What’s more, the trapezoid design of the island makes this kitchen a high-end level.

STUTTGART
One Wall & Island
High Gloss Veneer

OP15-057

The kitchen in dark wood grain color and beige presents a modern and elegant look. The layout of the kitchen cabinets appears symmetrical. With the pentagon high cabinets on both sides, the whole kitchen looks unique and attractive. What’s more, the trapezoid design of the island makes this kitchen a high-end level.
From its colors to its style, this kitchen cabinet is right up with the times. Shiny dark wood grain match with pure white. Like coffee and milk. So harmonious.
Stainless material is a new trend for kitchen cabinets. The door, the carcase and the countertop are stainless.

Made from stainless, which makes this kitchen cabinet easy to clean, and lights up the atmosphere in the kitchen.

People might think that the stainless kitchen cabinet is not suitable for household use, it should be more suitable for restaurants.

But what we show you is perfect for your own kitchen, because designers make it even homely from the appearance and design.
For this kitchen cabinet, the PVC finish for the door is imported from Japan. The sink and the stove are imported from Italy.

The alloy frame glass door is one of the highlights for the whole unit.

As for the lacquer finish open cabinet on both sides, they are 45° joint on the corner.
With the cool color tone, this unit shows the plain feeling.
The wall unit door is made from matt glass, so you can find out what you need easily.
The glass shelves above the island is another design highlight, the space is used effectively.

The sliding door is with aluminum frame, and behind the door is large storage space. All the kitchen wares can be stored in it.
It's like a huge base cabinet with drawers and shelves in it.
The white finish for the cabinets and the white countertop represent a feeling of tidiness.

The one wall shape kitchen cabinet, plus the island is convenient for the cooking, and the open units at the island is easy to reach.
The semi-transparent glass doors add the mysterious mood to the whole unit.

This kitchen cabinet is large in square. There are 3 sections in total. The cooking area, the fridge area and the island area.

The kitchen is not just a place where you cook, but also a place for socializing, and this kitchen cabinet meets both of the purposes.

Comparing with the traditional style, the transitional style is not complicated in appearance but with elements of both traditional and modern.
Smart Working Place
Small table next to the island makes preparing food become more easy. And it combines with the island harmoniously.
The dining table is near the window, so you can enjoy the beautiful scenery outside while you’re enjoying your cuisine.

The One Wall kitchen cabinet is a symbol of simplicity. For the wall unit, we use matt lacquer, and for the base cabinet, we use melamine. The open shelves at the both sides of the wall cabinet are easy to reach, and you can place kitchen wares that are frequently used. On the other side, there is also enough space for storage.
Small but organized, with PP door and granite countertop, this kitchen cabinet gives you enough space for cooking. You don’t need to worry about the space.

The symmetrical design is a symbol of aesthetics.

LAVA
OP16-PP103
Depending on grains and door patterns, PVC with MDF substrate can be used to reflect traditional or transitional style. Contrast to a traditional kitchen, this cottage style kitchen has uncompli- cated crown molding and range hood cover, no extra carvings. Bronze pulls add a traditional hint. The black backsplash aims to dissolve whiteness, the very important in the focused wall units, which enhance some transparency. Meanwhile, inside the wall units, built-in lamps can add extra illumination and bring atmosphere at night.
This kitchen is almost in white which maintains its elegance. And the wood floor evokes a comfortable style. Besides, with a single-wall layout and an island in the middle, this kitchen leaves an impression of great space. With all these decorations, cooks may feel at ease in this kitchen.

**Beautiful in design**
Besides, it looks very beautiful and gives a feeling of tidy.

**Spacious countertop**
This long single-wall countertop provides cooks a place to put some dishes when they finish washing. Also, they can put vegetables for cooking here.

**Visual Interest**
This functional high cabinet contains two cabinets for electronic appliances, which could save lots of space.
Thermofoil Wrap

It is a material breakthrough. At the first sight of this kitchen, you may think it is solid wood kitchen, but it is not. The door fronts and moldings are wrapped by a highly natural thermofoil PP. This special PP can also be distressed and painted, achieving state of the art aging effect. Besides, we add other traditional elements, such as woven doors, opening shelves and bronze handles and curtains, making this kitchen presenting a pleasurable and classical visual interests.

NICEA
OP14-035

We recommend PP door fronts, not only because of its lower cost, but also PP has many other benefits that solid wood does not have. To maintain its natural luster, you need to wax your natural door fronts regularly. However, PP door fronts do not require any extra maintenance, and it is more scratch and heat resistant than solid wood. By the way, as a substitute of solid wood, PP is a more eco-friendly material. If you want to reduce your footprints but get a traditional look, PP is one of the best choices.

Duke Walk-in

The traditional style brings the kitchen a scent of home, thinking of how happy and warm the scene would be when families get together.

Life is not easy, but a home could bring us relaxation and warmth.
Exquisite detailing is a sign of luxury. The handcrafted corbels, the star carving of the range hood, rope moldings and complicated base posts, all represent our state of the art crafts.

The fine raised red oak fronts are carefully stained and come into a sense of warmth and comfort. The big tiered stunning worktop can serve as a happy family dinner or a pleasant social gathering. Its black color allows a sense of gravitas. Also, the transparent wall units are the timeless design for a traditional kitchen.

Solid wood kitchen is timeless, it’s the robust beauty of wood coming from its grain, pattern and color. Each tree is unique and the growth is affected by its soil type and environment. No piece is the same as the next. Solid wood is considered a luxury product. Solid wood kitchen is not only for looking, but also an asset that reflects users’ dignity.

Solid wood kitchen has the following advantages:
- Thicker appearance
- No deformation to your home
- Luxury and elegance
- Choose high-quality natural wood veneer and hot pressed, retaining natural grain
- Waterproof, distortion and swell resistance, rupture resistance, containing wood emission performance
- Edges bordered by wood veneer

High Gloss – Lacquer & UV Lacquer

The sleek lines and contemporary styling of a high gloss finish create a bold statement in any kitchen. It is an elegant way to incorporate different design elements. High gloss can create environments with modern style that is sophisticated and bold. Solid wood kitchen has the following advantages:
- Glossy
- Easy to clean
- Alternative to replace lacquer
- UV light and moisture resistance
- Scratch resistant
- Images: Mirror, White, Silk, Black, Beige, Red, Olive, Light Grey and Brown
- Features: UV lighting, Matte Finish, Matte Lacquer
- Matte Finish is coming from Japan Carello Piano level and beauty isque inkjet in elegant and cleaning and antiseptic compound of 3 layers of primer and 2 layers of top coat, surface hardness is 6.5,
- Good scratchproof
- Adhesives performance
- Antioxidant

Gloss – Sleek Acrylic

Acrylic is a polymer created when gaseous monomers combine chemically. Finished acrylic sheet exhibits glass-like qualities – clarity, brilliance, transparency, translucence. It can be bright or colored, mirrored or made opaque. A number of coatings can be applied to a sheet to create interesting effects such as scratch resistance, with fringed, frosted or mirrored edges.

Wood Grain-Thermofoil

Thermofoil (also called PVC or polymer), laminate and melamine can be printed with beautiful natural wood grain. To compare, PVC door is more likely to achieve traditional or transitional style. Because PVC has MDF substrate, and MDF can be molded into raised or recessed door pattern. Meanwhile, laminate or melamine has fewer portray as facade. Particle board is flat and can not be painted or colored to change in door shape. As to laminate and melamine, laminate is thinner and harder than melamine.

Thermofoil, laminate and melamine has the following advantages:
- Water proof
- Radiant wood imitation
- Thinnest and even colors
- High gloss or matt natural color

Textured Laminates & Melamine

Laminate and melamine has been the most widely used material in kitchen and furniture surface. Many people consider laminate and melamine is low end. However they have been phenomenal in the last couple of years in give back to their lost value as an interesting product. Instead, melamine has undergone a major facelift. Not only the amount of new finishes has increased considerably but colors were also updated, thus meeting the requirements of a modern client.

Laminate and melamine has the following advantages:
- Wear resistance
- Heat resistance
- Waterproof
- 3D texture available

Wood Grain Thermotrol

Wood grain thermotrol can offer different wood species, such as birch, cherry wood, walnut, red oak, alder, maple, etc. OPPEIN can offer different wood species, such as birch, cherry wood, walnut, red oak, alder, maple, etc. It can be tinted or colored, mirrored or made opaque. A number of coatings can be applied to a sheet to create interesting effects such as scratch resistance, with fringed, frosted or mirrored edges.

PVC door is made easy to achieve traditional or transitional style, because PVC has got MDF as base, and MDF can be molded into raised or recessed door pattern.
