

## description

The formal characteristic of this chair is, without a doubt, beautifully displayed/evidenced in the back part of the chair body. The detail that has not only aesthetic value but structural as well, as it reinforces the junction between the seat and backrest, which is always the most critical point when considering the resistance of a product. Therefore, the clean lines and structural precision as well as fine detail differentiate this product, separating it from the vagueness of existing conventional alternatives.

armchair

## description

Tonda is born from the combination of two different materials: the plywood plate and the injected polypropylene. The most innovative thing of Tonda is the combination of solid oak wood in its legs, oak wood veneered plywood plate in its seat, and injected polypropylene in its backrest. This way we can build from a really serious office chair until a funny swivel armchair for hotels or restaurants.

Comfortable, light, singular... a new interpretation of a classic concept. Tonda is fresh and different, really attractive, something irresistible and suitable to be used in almost every space. Available in some different colours and combinations, Tonda is offered in different kinds of legs too.

Seats like large and small wreaths of peonies lamps in bud, create profiles and shapes for a totally elegant object.

## technical info

# saloon

design by  
Enrique Martí Associates

## description

It's always funny and interesting to make some crazy experiments trying to change the language of some classic designs to obtain something really new and different. Something fresh, more depurated in its lines and volumes, something with the taste and flavor of the best tradition but completely new.

When we designed the SALOON chair we chose as starting point the classical Austrian bentwood chair used since centuries in coffee shops and gatherings. We dismantle and assemble it again and again changing its look, its shape, its volumes, its materials. We continued developing, creating a new concept, a new design combining the wood and the plastic in a new, different and innovative way.

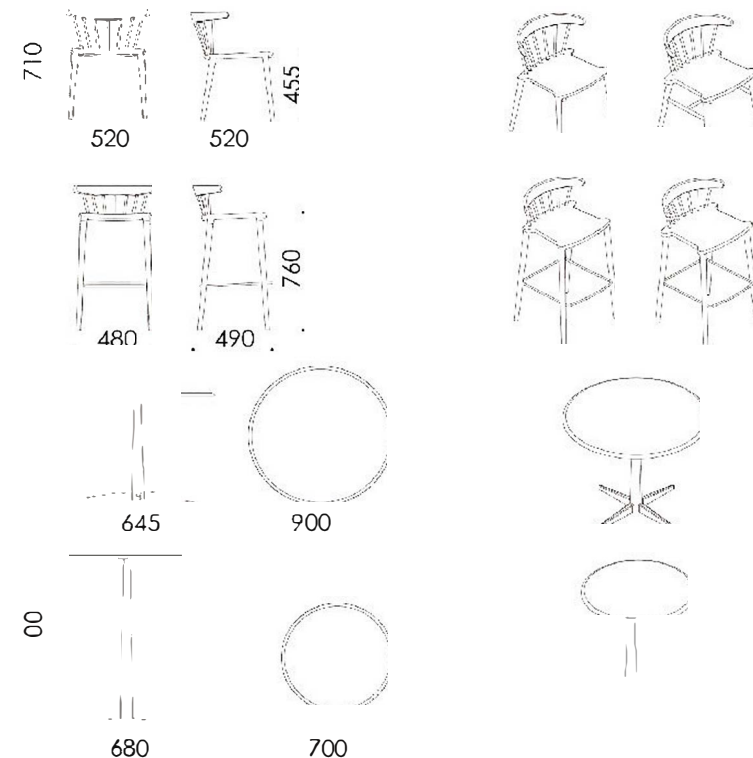

We divided the chair in four main parts: legs, bars, seat and backrest, having the possibility to combine two different materials, plastic and solid oak wood, in the two first ones (legs and bars) with the seat and back always manufactured in plastic. This way you can choose between four different material combinations for this new chair. Simple but effective...

SALOON is a technical challenge too, being much stronger than it seems and it's offered in different colors for the wooden parts and in some other colors for injected polypropylene reinforced with fiber glass pieces being 100% recyclable. SALOON is stackable and could be suitable for almost every environment.

The SALOON table base is made in solid oak wood combined with a painted aluminum column available in the same colors than the techno-polymer pieces, and can be offered with tops in different sizes and materials.

A new version of the SALOON chair completely made in solid beech wood is currently available too.

## description

Like a game. A kind of journey in the quest for a new classic trying to give complete sense to its volumes and shapes. A deep dive inside the everyday objects to find something new but with all the essence and flavor of timeless things.

When we started to create the WASOSKY chair for OOLAND we chose the ancient technic of the folded paper known as "origami" as starting point. We folded tens of small papers looking for the right shape, something new but recognizable, comfortable and different, fresh, contemporary, attractive... something you really fall in love at first sight.

After several tries the WASOSKY chair clearly appeared in our hands. A clear Nordic inspiration. A reinterpretation of the classic plywood chairs. A single volume repeated in its seat and back. A soft round surface which makes the seat experience a real pleasure. A central hole which reminds its folded paper origins. An outright contemporary essence with all the gentle beauty of the things that you love even without realizing. A lot of added values that makes WASOSKY almost a perfect seat... almost the all-purpose best option. All its lines, all its details... every single volume has been carefully designed to get the best for the OOLAND customers, for continuing offering them only the best original designs. WASOSKY is offered in injected polypropylene reinforced with fiber glass in different colors. It's available in different bases some of them absolutely stackable.

## description

When we designed the GOTCHA chair we started from a very simple idea; to design an oversized chair with a divided backrest to the best optimization of its comfort. Once the backrest was divided we added some small attractive pieces which main function is to allow one stripe to reinforce and at the same to be reinforced by the two other stripes just besides it. This way we created a kind of arbitrary map of funny jellyfish which seemed to swim across the wh When we designed the GOTCHA chair we started from a very simple idea; to design an ole backrest.

We took care of every single detail trying to get the maximum comfort. We looked for a big concave joint between seat and back and after that we combined this very attractive shell with some different bases.

So the GOTCHA backrest is singular, different, only.... Creating with its different possible materials and bases combinations a wide range of options for everyone to choose its favorite version.

GOTCHA is offered in injected polypropylene reinforced with fiber glass finish 100% recyclable and available in different colors. You can choose between different options for its base some of them absolutely stackable, from the wooden one offered in several finishes to the chromed or painted frames.

chair

## description

Clearly inspired in the nature and in the careful work of the Nordic woodwork masters TREE seems to have been patiently modeled by the own nature and the time. Soft, rounded, friendly... TREE turns all the ancient wooden work aesthetic details in a single plastic chair.

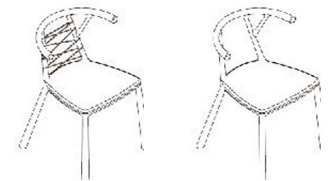

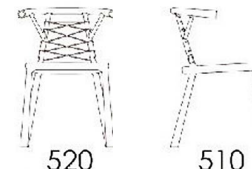

Full of evocations to the past TREE is however a very fresh, new and different chair harmoniously topped with its particular weaved backrest which provides an original and particular look with also the best comfort.

Its backrest, legs, arms... all of them carefully modeled as small natural branches, as water modelled strong stones, as soft carved wooden pieces... You will enjoy stroking it, using it, making it part of your life and environment.

TREE bring us all the charm of the traditional and natural things, of all those things such well-designed that have become a timeless piece... something eternal but translated to the 21st century language, a design between two worlds.

TREE is made in fiberglass reinforced polypropylene and is available in some different plastic and weaving colors too.

# mr.x

design by  
**Enrique Martí Associates**

armchair  
table

## description

If every new project is always a challenge to design a new Nordic look wooden chair is even harder. This time we tried to introduce some new languages to the OOLAND catalogue, a new model in which the plastic loose its always preponderant role to be replaced by the kindness and warmth of the wood.

Based in the ancient Nordic woodcraft the new MR.X armchair presents its original "X" shape legs as main characteristic point. This way we have created a new and original wooden frame topped with a solid bentwood backrest which also serves as short arms. This solid wood frame is completed with a single plastic shell as seat and backrest being a real technical challenge the big gap of the front part of the seat completely in the air. Mr.X is soft, rounded, friendly, comfortable... with a very refined proportion which allows this armchair to be much more than solid enough with as less material as possible. A very hard challenge passed by the OOLAND technics.

Mr.X frame is completely made in solid oak wood and is available in different colors, being its shell manufactured in injected polypropylene reinforced with fiber glass finish available in several colors being 100% recyclable.

The Mr.X table base is made, as the shell of the armchair in solid oak wood and is available in the same finishes. This base can be completed with tops in different sizes and materials.

# craddle

design by  
**Enrique Martí Associates**

armchair

## description

It's always very interesting and funny to take some very good ideas from the past for trying later to update them giving a new and fresh look but keeping all the genuine spirit of their origins.

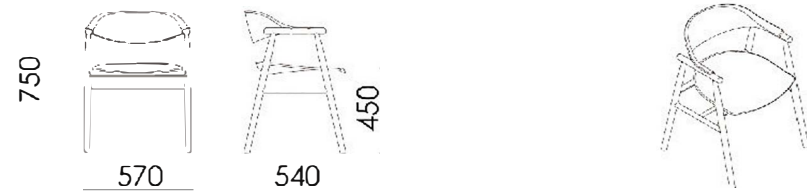

This is the starting point of the CRADDLE armchair. Trying to combine two different and trendy materials as the plastic and wood are, we started from a traditional typology of Scandinavian armchair for later simplify it to the maximum but without losing its original flavor.

All the wooden frame is made with round section pieces joint one to each other in the traditional way, but the original plywood or upholstered seat and back have been replaced by polypropylene shells which give the armchair a more modern, contemporary and trendy look.

The fiberglass reinforced polypropylene gives due its particular flexion and soft strength an extra comfort when sat on the armchair, being at same time the raw combination of such different materials an added value in originality and distinction.

CRADDLE is available in some different wood and plastic colors and finishes.

## technical info

# slinky

design by  
**Enrique Martí Associates**

armchair

## description

Whose don't remember their childhood...? Just when one of the biggest pleasures was to swinging in front and back, floating in the air, flying in our swing. It always seems to every one of us that there is nothing more comfortable and relaxed that floating in the air so... why don't build a new seat which allow us to recover those lost pleasures? Those forgotten sensations...

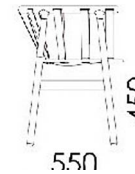

This is the main spirit of SLINKY, to build a new and different kind of seat which allow us to float in the air when sat on it, but still being something recognizable as a domestic or collective use seating. Nothing strange, nothing difficult, just high dose of originality to combine both concepts in just only one armchair, and armchair that almost everybody can like, and armchair that in the midway between something serious and something funny, between something fresh and something known, between the use and the feeling... something really special.

For making it even more attractive we decide to use the combination of different materials here too, being the main frame of reinforced fiberglass polypropylene but using four wooden legs to support it joint in a solid and strong frame.

The polypropylene threads belts support the seat hanging from the backrest being the third different material included in this innovative combination and creating at same time the really unique sensation to be sat just floating in the air.

A new, different, fresh, and singular design which has the unique feature of making us to remind some of the best sensations in our lives... To feel like flying.

## technical info

# pelikan

design by  
**Oolab**

sofa  
tea-table

## description

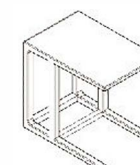

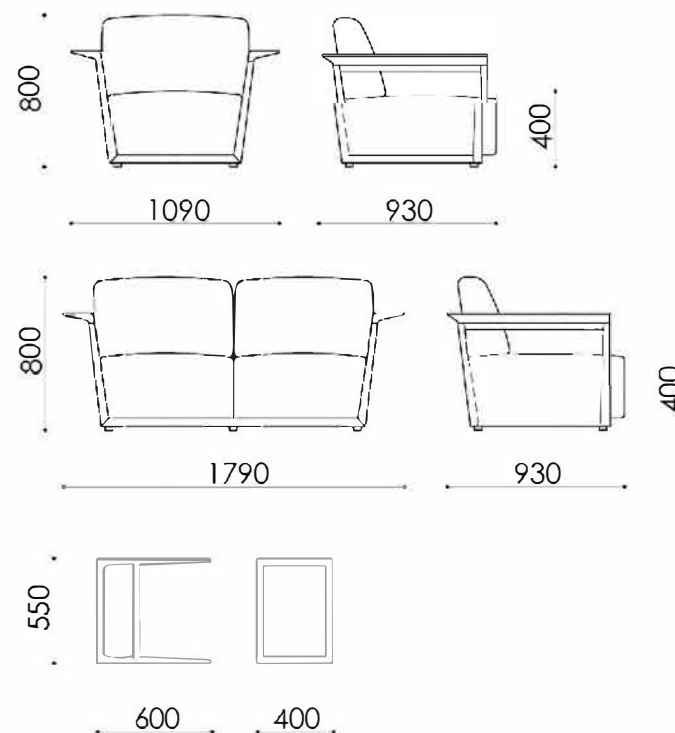

It's always a challenge to build such big and complex frames in solid wood. It was the main idea we have in mind when we started to design the PELIKAN sofa collection. This particular combination of solid oak or walnut wood with the softest upholstered pillows to offer and extra comfort for every user.

So, the main feature of this singular collection is its beautiful solid wood frame with a particular section which seems the side view of a Pelican, present in some of its main parts as arms and backrest are.

But PELIKAN is also a modular collection which allows to combine some of its different components for creating bigger sofas and "island" for resting alone or in company. Always elegant, always comfortable, always different... far from the classic concept of upholstered sofa PELIKAN is a small furniture treasure, a higher level.

With some other components as auxiliary coffee tables which can be combined with the seating, PELIKAN is inspired in the white light of the Mediterranean, in the fresh air of our seashores, in our quiet and peaceful sunsets... In the way we live.
